

ROCKPOOL ADAPTATIONS

A Rockpool is sometimes a very tricky place to live with waves crashing over them. As you go around the aquarium see if you can find out what special features rockpool animals have to live in their watery home.

Rockpool Bingo

The aim of this game is to make a straight line in any direction on the grid below by finding animals relating to each square. Once you have found an animal write down its name.

Something spiky	Something fan shaped	Something stripy	Something round
Something with a curly tail	Something with a hard shell	Something with fins	Something that stings
Something that has 5 arms	Something with sharp claws	Something that puffs up	Something with sharp teeth
Something with spots	Something that slithers	Something that sparkles	Something that hides

See if you can answer the following questions.

1. Why does a turtle have a hard shell?

2. Why do sea anemones have stinging tentacles?

3. Why do you think a sea horse has a curly tail?

4. Why do starfish have tiny suckers of their feet?

5. How many legs does a crab have?
